About JOIN PLASTIC

Shanghai Join Plastic Co., Ltd.

Plastic packaging expertise since 2005.

Founded in 2005, Shanghai Join Plastic Co., Ltd. brings together research and development, design, injection-moulding production, sales and trade. The company operates a factory covering more than 6,000 square metres.

Factory and reusable-container storage

One partner, from design to supply.

Our aim is to make integrated packaging practical: bringing quality, convenience, economy and environmental responsibility into the way customers store and move their goods.

Expanding into North America

We are expanding into the North American market and will soon establish a local team in Canada.

Built around your requirements

Product development, manufacturing and OEM services

A broad range. Room for your own design.

Container storage, returnable packaging and conveyor handling

An integrated product range

Industrial and automation containers, stack-and-nest boxes, attached-lid and folding containers, beverage and produce crates, parts bins, glass racks, pallets, bulk containers and handling accessories.

Custom processing and OEM production

We accept projects based on customer drawings, samples, moulds and supplied materials, including injection-moulding processing and OEM production. Share the application and required configuration so the product and production requirements can be reviewed together.

Start with your application

Send the contents, dimensions, handling method, quantity and any drawings or samples. Include material, colour and branding requirements where applicable.

Product directory

Company profile 02-03 | Selection guide 05

A clearer way to specify

Product selection and enquiry guide

Find the family. Compare the details.

Use the product code and dimensions together to identify your selection. Similar model names may refer to different versions.

Start with the product family

The directory groups containers, crates, pallets and accessories by type. The code index takes you directly to a listed code.

Check the configuration

Review the complete description, including lid, base, handle, divider and opening details where specified.

Include the code in your enquiry

Send the product code, dimensions, quantity and your required color and material. For a product without a listed code, use its enquiry reference.

Reading the product details

Dimensions are reproduced as listed. Two-value entries do not imply a height. Where four measurements are listed, confirm their order. Representative images illustrate a family; colors shown do not define available colors. Material and color requirements are confirmed by enquiry.

Industrial containers

Family overview

Organised handling, from parts to production.

Application example

Industrial containers bring structure to the movement of components through production, storage and distribution. The range includes ST, EU, KLT and HP families, with model-specific lids, bases, handles and inserts. Start with the required footprint, then choose the configuration that suits your parts and handling process.

ST & EU families

Rigid containers in a range of footprints and heights, with lids and divider options where listed.

KLT & HP families

Alternative formats for component handling. Select the specified base and handle arrangement.

Complete the configuration

Match lids, inserts and label accessories to the exact container model.

Stack & nest containers

Family overview

Stack for use. Nest for return.

Application example

Stack-and-nest containers offer two handling arrangements within one reusable format: supported stacking in use and nesting when empty. The range brings together solid and ventilated versions, with lids on selected models. Choose the footprint and depth for your goods, then check how the selected model stacks and nests.

Two handling arrangements

Use the stacking and nesting positions specified for the chosen model.

Solid or ventilated

Compare base and wall configurations to suit the contents and workflow.

A considered footprint

Check container dimensions, usable space and the matching lid where required.

Explore models and specifications from page 19

Stack & nest containers

Dimensions in mm

6060 stack-and-nest container with lid

ZCP252

600 x 600 x 430

Attached-lid & nesting containers

Family overview

A lid for the journey. Less space on return.

Application example

Nesting containers with lids are used for organised storage and distribution, including retail and postal handling. Their nesting format makes empty containers easier to consolidate between trips. This family includes different capacities, handle arrangements and access styles; confirm the lid configuration and nesting method for the model you select.

Covered handling

Lidded versions keep the closure with the selected container configuration.

Empty-container storage

Nest compatible containers to reduce the space occupied between uses.

Choose the right access

Compare handled, flat-rim and open-front versions in the following pages.

86 nestable container (flat rim)

CP0371

800 x 600 x 220

A nesting container with an open front for access to the contents.

86 nestable container (open front)

CP0372

800 x 600 x 220

Folding containers

Family overview

Reusable capacity that folds away.

Application example

Folding containers support repeated handling while reducing the space occupied by empty boxes. The range includes EUO and 570-series products, open and lidded versions, and selected models with side access. They serve varied storage and distribution needs, from retail and clothing to parts handling. Compare the assembled dimensions and opening details before choosing a version.

Fold when empty

Collapsible walls simplify empty-container storage and return handling.

Choose your opening

Open tops, lids and side-access versions are identified in the model descriptions.

Match the application

Solid containers and ventilated crates offer different handling formats.

Parts bins & organisers

Family overview

Small parts, easier to organise.

Application example

Parts bins help separate components and keep them accessible during picking, assembly and stock replenishment. This family includes open bins and compartment versions, with a matching divider for the 6115 model. Choose the bin size around the parts being stored and the available shelf or workstation space.

Visible organisation

Keep different components in clearly assigned bins.

Compartment options

Use the listed compartment configurations to separate smaller items.

Plan the workstation

Check the bin footprint, height and access before arranging shelves or benches.

Explore models and specifications from page 47

Parts bins & organisers

Dimensions in mm

A parts-storage bin for organising components at a shelf or workstation. Check the compartment arrangement.

400 parts bin

CP0507

400 x 175 x 210

A parts-storage bin for organising components at a shelf or workstation. Check the compartment arrangement.

6115 compartment parts bin

CP0156

635 x 150 x 150

An internal divider for organising separate parts or contents. Check the named container, profile and orientation.

Bottle & beverage crates

Family overview

Give every bottle its place.

Application example

Bottle and beverage crates organise containers for handling, storage and distribution. Compartment formats help keep bottles separated, while smaller carriers offer a convenient handling format. The range includes milk and beer crates, handled carriers and water-bottle carriers. Select by bottle quantity and size, then check compartment clearance and the required handling arrangement.

Compartment layouts

Compare bottle counts and cell arrangements across the range.

Carry or distribute

Choose between compact handled carriers and larger distribution crates.

Check the bottle fit

Confirm bottle diameter, height and weight against the selected crate.

Explore models and specifications from page 50

Glass racks

Family overview

A practical system for glass handling.

Application example

Glass-rack systems combine bases and extenders to organise glassware during handling and washing. Choose the compartment layout around the widest part of the glass, then select the rack height to suit it. New and original systems are shown separately in this catalogue so that bases, extenders and accessories can be matched within the correct family.

Start with diameter

Measure the widest point of the glass to select the compartment size.

Then check height

Measure to the top of the rim and choose the required extender arrangement.

Keep systems matched

Confirm base, extender and accessory compatibility before ordering.

Explore models and specifications from page 56

Glass racks

Dimensions in mm

New glass-rack system

A glass-handling rack system. Select compatible bases and extenders around glass diameter and height.

Model / configuration	Code	Size (mm)
New glass rack: universal open base	CP509	490 x 490 x 100

Pallets & bulk handling

Family overview

Bring larger loads into one handling format.

Application example

Plastic pallets, pallet boxes and sleeve-pack components support the storage and movement of larger quantities of goods. The range includes different deck and base layouts, collapsible bulk formats and modular pallet collars. Select the footprint first, then check the handling equipment, load requirements and complete base, sleeve and lid configuration for your application.

Pallet formats

Compare grid or solid decks, runner arrangements and perimeter-base designs.

Bulk containers

Folding pallet boxes and sleeve packs provide larger-volume handling formats.

Specify the complete load

Confirm working load, handling method and component compatibility for the selected model.

Explore models and specifications from page 59

Pallets & bulk handling

Dimensions in mm

Produce & utility crates

Family overview

From collection to everyday distribution.

Application example

Produce and utility crates support the sorting, storage and movement of goods, including fruit, vegetables and seafood. The range includes different depths, footprints and wall or base configurations. Choose a format around the product being handled, the way crates will be stacked and the storage or distribution process.

Match the contents

Shallow trays and deeper crates serve different goods and handling stages.

Choose the structure

Check the solid or ventilated configuration shown for each model.

Plan the handling route

Consider stacking, carrying, cleaning and the available storage space.

Explore models and specifications from page 64

Food & bakery

Family overview

Keep preparation and handling organised.

Application example

Trays, boxes and containers bring consistent formats to bakery and food-handling workflows. The range includes dough trays, pizza and flatbread boxes, cake containers and other named food containers. Select the model around the product, tray footprint and required lid. Material, intended contact conditions and cleaning requirements should be specified for the application.

Preparation formats

Choose dough trays and matching lids for the required working footprint.

Separate product types

Compare pizza, flatbread, cake and other container configurations.

Specify operating conditions

Confirm material and suitability for your contact, temperature and cleaning requirements.

Explore models and specifications from page 68

Food & bakery

400 x 300 x 220

Storage & general containers

Family overview

A place for everyday stock and supplies.

Selected products from this family

General storage containers cover a broad range of organisation and handling needs. Open and lidded boxes, carry boxes, toolboxes, trays and storage racks provide different ways to hold and access goods. Choose the format around the contents and available space, then compare lid, opening and divider details where listed.

Open or covered

Choose direct access or a lidded configuration to suit the task.

Portable or stationary

Carry boxes and toolboxes complement floor racks and general storage boxes.

Check special uses

For named specialist containers, confirm the material and intended operating conditions.

Explore models and specifications from page 72

Airport, textile & handling

Family overview

Handling formats for different workplaces.

Application example

This family brings together airport trays, textile trays, dollies, trolley platforms and mobile boxes. Each format serves a different part of the handling process, from presenting items at a screening point to moving containers within a workplace. Select the product by task and check its footprint, support arrangement and compatibility with the intended equipment.

Trays for the task

Compare baggage, security and textile tray formats.

Mobile handling

Dollies, platforms and wheeled boxes offer different ways to move goods.

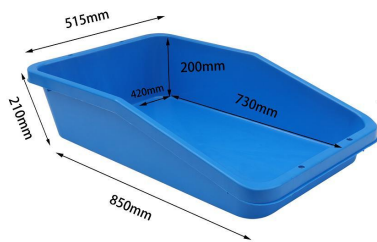

Check the interface

Confirm container fit, wheel requirements and working load for the selected equipment.

Explore models and specifications from page 84

Insect rearing trays

Family overview

Consistent trays for organised rearing.

Application example

Insect rearing trays provide repeatable handling formats for rearing operations, including black soldier fly applications described in the earlier catalogue. Different footprints and depths suit different layouts and processes. Review the tray dimensions, stacking arrangement and matching chip covers where listed, and confirm suitability for the intended rearing and cleaning conditions.

Select the tray format

Compare the listed footprints and depths with the planned rearing layout.

Match accessories

Chip covers are listed for specific tray models.

Review the process

Check handling, stacking and cleaning requirements before selecting the final configuration.

Explore models and specifications from [page 89](#)

Automation totes & inserts

Family overview

A defined format for automated handling.

Application example

Automation totes provide consistent container formats for storage and internal logistics systems. The range includes slotted and unslotted versions, different depths, selected access-door configurations and matching inserts or dividers. Choose the tote and internal arrangement together, then verify compatibility with the conveyor, racking and handling equipment used in your system.

Container geometry

Check footprint, height and base design against the equipment interface.

Internal organisation

Use the listed dividers or moulded inserts to create the required layout.

System compatibility

Confirm dimensional, load and handling requirements for the exact model.

Explore models and specifications from [page 92](#)

Dividers & label accessories

Family overview

Finish the container around the contents.

Selected products from this family

Dividers and label accessories complete a container configuration. Divider formats separate the contents, while label inserts and holders provide a place for identification. The range includes accessories for ST, EU, HP, EUO and other listed container families. Use the product description and code to match each accessory to its intended container.

- | | |
|----------------------------------|--|
| Separate the contents | Select divider dimensions and profiles for the required internal arrangement. |
| Make identification clear | Choose label inserts or holders for the relevant container family. |
| Match before ordering | Confirm the container model, accessory version and required quantity together. |
